n8n-Powered Overseas B2B Lead Generation

How the workflow finds, filters, enriches and contacts overseas importer-wholesalers

MANAGEMENT WORKFLOW DEMONSTRATION

B2B scope only • Human-approved outreach • Traceable workflow execution

The target is a B2B distributor—not the end consumer

CURRENT PHASE: B2B ONLY | B2C CUSTOMER ACQUISITION IS OUTSIDE SCOPE

n8n connects the workflow; APIs, rules and AI do specialist work

n8n

Schedules runs, moves JSON between nodes, applies routing rules and records execution status.

n8n is the conductor—not the customer-data source and not the language model.

Customer acquisition: search to stored company record

The source URL is retained so every company can be reviewed and traced.

Filtering: raw companies become verified, contact-ready sales leads

Illustrative UAE apparel scenario

AI extracts evidence • n8n IF/Switch nodes route each item • verification services validate business contacts

Illustrative demonstration data—not actual campaign results

Contact workflow: approve, send and update CRM

Every action keeps the lead ID, source URL, message version and n8n execution log.
